## TOKEN AURICOIN (RIC)

The AURICoin team will be generated through a Smart Ethereum Contract according to the ERC-20 and TOKEN AURICoin (RIC) standard. All portfolios that support Ether, including MyEtherWallet, MetaMask, Parity, Mist, ImToken and Ethereum Wallet, are compatible tokens with ERC-20.

**TOKEN**  
AURICoin

## FUNCTION OF TOKEN

The AURICoin token provides a system for the direct transfer of assets that is established almost in real time, and is a cheaper, transparent and secure alternative to the transfer systems and financial guarantees currently used. The main objective of AURICoin is to move a large amount of money into new financial assets around the world faster and more efficiently.

Tokens that comply with the requirements of the "mosaic" on the standard of the Ethereum blockchain are non-mineable digital tokens that are issued in their entirety through an intelligent contract on that platform. AURICoin guarantees that it will use and accept the Token to grant credits, issue letters of credit, issue financial documents of value, receive payments of credits, receive payments of letters of credit, also accept the Token to receive the interest generated by the funds credits, as a form of payment for your platform, fees, commissions, advertising, commissions for the use of the platform, payment of licenses issued by AURICoin, for the use of its platform to other companies or people.

**TOKEN**  
AURICoin

## FUNCIÓN DEL TOKEN

As part of the financing campaign that AURICoin promotes, users can join the platform with the purchase of a small number of tokens. The money collected in the ICO will be used to create a monetary fund, which will be linked to funds from other accredited investors, and will be used to cover the development costs as explained below and also to grant credits.

AURICOIN

## ELIGIBILITY OF THE AWARDEE AND CONFORMITY WITH KYC / AML

All rounds will strictly follow the KYC (Know your customer) and AML (Anti money laundering) policies.

## CONSTANT DEMAND GROWTH

1. No Advance Sale is celebrated.
2. We have not yet made an Advance Sale.
3. We have consciously abstained from conducting these first rounds of token sales that would result in a distribution of priority rights and significant bonuses and discounts.
4. Instead, we offer the same conditions to all participants in the Token Sale, which will result in a more stable token value when it is included in the cryptocurrency exchange sites.

## ADVANTAGES OF THE ETHEREUM BLOCK CHAIN

Ethereum is a digital platform that adopts blockchain technology established by Bitcoin and expands its use to a wide variety of applications. It should not be confused with Ether (the underlying cryptocurrency of the network) which is also usually called Ethereum.

The Ethereum platform was created in 2015 by the programmer Vitalik Buterin, with the perspective of creating an instrument for decentralized and collaborative applications. Ether (ETH) is a token that can be used in transactions that use this software. As Bitcoin, Ether exists as part of an autonomous financial system of peers, free of government intervention.

Therefore, although this is only one of hundreds of cryptocurrencies, it is also one of the few that have a significant market capitalization, along with its two major rivals, Bitcoin and Bitcoin Cash.

The principles behind the use of Turing language, ensures the versatility of its functions.

Due to its complete and sophisticated chain of blocks, complex contracts can be executed, without needing the service of third parties in most cases. In short, a pretty complete package.

It is a platform for other products, which makes it very solid, since every day the information is improved. What makes it a network that works facilitating the input and contribution to the developers.

It is a roadmap designed to remain for many years, allowing the community to know what to expect in the coming years. Especially for offering continuous improvements.
